

## Independent Activity

Go to the kitchen and find some food that you can cut in half. Make sure both halves are the same size. Can you make a fruit salad by cutting each piece of fruit in half? At lunch time, can you cut your sandwich in half?

### Extension

If you cut something in half and then cut those halves in half, you end up with quarters. We write 1 quarter like this. The bottom number tells you how many pieces there are.

**Cut pieces of fruit or food in half and then in half again to make 4 equal quarters.**
